

## **Data explanatory notes**

These files contain interview transcripts for interviews conducted during the TRUST: Tracing Risk and Uncertainty in Security Technology project (ESRC Grant Reference: ES/K011332/1).

All interviews have been redacted to remove information that could identify the interviewee, and to remove any confidential technical information pertaining to the development of the HANDHOLD device (the case study of the TRUST project).

Interview codings are included in the title, along with the dates of the interviews.

Interview codings relate to the respondent. E.g.: SE1, SE3, ENDU2.

SE codes relate to scientists and engineers.

ENDU codes relate to end-users (e.g. police, customs etc).

Some interviews were conducted as group interviews.

Each transcript indicates the number of respondents R1, R2; and the number of interviewers I1, I2 from the TRUST project.

Outputs from the project using these transcripts can be accessed at
