Megaold: Baseline and 2.5 year follow up surveys, of people aged 65+ and 85+ in East London and Essex with flagged deaths recorded
AcQ8276 on RESHARE

Notes:

- Megaold is a merged dataset derived from 3 baseline, face-to-face interview surveys of people aged 65+ and 85+ living at home in Hackney, East London, and in Braintree, Essex, and face-to-face interview follow-up at 2.5 years. Thus the coding box numbers on the questionnaires do not correspond with the Megaold merged dataset.
- Some variables have been removed from the dataset to protect respondent confidentiality and, for example, where they were the focus of a PhD thesis of one of the investigators (Morag C Farquhar, Older people's definitions of quality of life and relevance of various scales. University of London, 2009).
- See the list of published papers, many of which are accessible on-line, for details of the samples, response rates, baseline and follow-up, and mortality results.
