Acknowledgement of assistance

The 2009 EES voter study would not have been possible without the help of many colleagues, both members of the PIREDEU team and country experts from the wider academic community, who spent valuable time on the questionnaire and data, often at very short notice. We would like to acknowledge their work here and thank them warmly, for without their assistance the EES 2009 would certainly be of lesser quality.

Introduction

The Advance Release Notes accompany the Advance Release of the 2009 EES Voter Study. They are not intended as a complete codebook, but instead are aimed to provide users of the advance release data – typically users who are accustomed to working with large-scale, cross-country datasets – with sufficient information to make good use of the data. Those users seeking a fully documented version of the data should wait for the 2009 EES Voter Study Final Release, expected by end of 2010.

We provide the current data with a note of caution. Initial cleaning of the data has been put into effect and a number of issues has been detected and corrected. However, this is not the Final Release and users should be aware that some errors may have gone undetected. We encourage users of the data to contact us should they suspect errors or anomalies in the data via email at vanEgmond@uva.nl (Marcel van Egmond) or Eliyahu.Sapir@nottingham.ac.uk (Eliyahu Sapir).

While this Advanced Released will be followed by a Final Release by end of 2010, users will be happy to learn the structure of the file, including variable names and variable coding, including missing value codes, will remain unchanged (barring any errors as yet undetected). Users are therefore encouraged to retain their setup files (analyses and recodes etc.), as these should function (virtually) unchanged on the Final Release data as well.

Data collection

Data collection was started on the first working day following the 2009 European Parliament elections (4 to 7 June 2009). Intended sample size was 1,000 successful interviews each EU member state.

Data collection was done by CATI phone interview. In seven countries (Bulgaria, Czech Republic, Estonia, Hungary, Latvia, Lithuania, Poland, Romania and Slovakia) representative phone sampling was not feasible. In these countries, 70 percent of interviews were achieved by face-to-face mode, while the remaining 30 percent was achieved by phone. Exclude mode-effects as much as possible, face-to-face interview did not use additional aids such as showcards, except for questions Q101 (level of education) and Q113 (occupation) where showcards were used.

Structure of the data file

Variable names

The data file consists of three sets of variables, distinguished by the preceding characters T, Q and V.

T variables describe the interview, e.g., respondent id, country, date/length/mode of interview, et cetera.

Q variables comprise the interview questions. Both variable order and -numbering reflect that of the 2009 questionnaire.

V variables are additional variables, based either on additional information from the fieldwork agency, or derived on the basis of questionnaire variables. Currently, only a per-country weight factor is included (V100), as well as a country-comparable education variable based on ISCED coding (V200). It is foreseen that the number of V-variables will increase in a future release, but current variables names will be respected.

Missing Values

Where possible, Q variables follow an identical missing values labeling scheme.

For 1 digit variables, this consists of:

- 7: Refused [REF]
- 8: Don't Know [DK]
- 9: Not Applicable/not available [NAP]

For two digit variables, the labeling scheme is

- 77: Refused [REF]
- 88: Don't Know [DK]
- 99: Not Applicable/not available [NAP]

In addition, a number of variables (e.g., vote choice) have additional missing value labels within this range. Where relevant, consistent labeling has been implemented.

Please note that *no* missing values have been defined in the Advance Release file, so it is up to the researcher to decide how to deal with various causes of missing data.

Country specific labeling

For a number of variables, country specific labels have been used in the questionnaires. Examples of these are party choice questions and level of education, amongst others. In the integrated data file, these variables would cause problems since values are not identical across countries. Hence, country specific codes have been constructed by preceding the question codes by a country values, consisting of the 3-digit ISO-code of the country and preceded by a 1. This 4-digit country prefix is hence identical to the country codes used in variable T102 (and referred to as 1+ISO).

Where possible, the original question codes have been maintained as suffixes. Missing values are not country specific.

A special case form the questions regarding placement of parties along the left-right continuum (Q47_), EU-unification continuum (Q81_) and the probability to vote questions (Q39_). For these variables, not the answer options, but the actual questions vary by country. For these three sets of questions, the specific party probed is described in these release notes (see below).

We note that the order of these party-questions is identical for all three questions (i.e., Q47_1 probes the same party as Q81_1 and Q39_1, for each country) and is identical to the order used in the original country questionnaires. An excel sheet, containing party probed (per variable), as well as the corresponding party codes (used in the vote choice and party ID questions), is provided for the user's convenience.

Variables not yet available for release

A small number of variables are not yet available for release. Reasons for this include matters the risk of identity disclosure, (additional) funding restrictions and data integrity and coding. Except where identity disclosure prevents this, all data will be made available in the Final Release.

Variable Specific notes

The following is a description of those variables where additional information may be required.

Q8_x & Q12_x: Media outlets watched (prompted)

Each variable (q8_a to q8_d, q12_a to q12_c) prompts for the following outlet in the respective countries.

Country	Q8	TV Program	Q12	Newspapers

Q25-Q28 Party Choice

Questions q25-q28 ask for EU and national party choice – the answer options (parties) vary per country.

Country specific codes have been recoded and now start with a country prefix (1+ISO) followed by a specific code per party. Labels are included in the integrated data file. See attached excel sheet “ees 2009 party codes & variables.xls” for the party names and codes used in these questions, as well as questions q39, q47, q81, q87 and q90.

Additional missing values codes (9x) are labeled per question in the file.

Please note that in **Luxembourg** EP elections are always concurrent with national parliament elections. Q28 therefore asks what R voted in the concurrent national election.

Q26b (Ireland and Belgium only)

What party voted for in the local/regional election, held concurrently.

Please note that in Ireland this question was originally omitted for the first approximately 300 respondents. When this error was discovered, attempts were made to recontact this group. Variable **t204** indicates whether a respondent was part of this call-back group. If no re-contact could be made, variable q26b was coded NAP.

Q28 Luxembourg

Please note that in Luxembourg EP elections are always concurrent with national parliament elections. Q28 therefore asks what R voted in the concurrent national election.

Q39_ pxx, Q47_ pxx, Q81_ pxx

Q39_ pxx (probability to vote), Q47_ pxx (left-right placement) Q81_ pxx (EU unification stance): each questions probes one specific party. The party probed is documented in the attached excel sheet “ees 2009 party codes & variables.xls”.

The suffixes (_ pxx) are consistent for all three blocs of questions, and are identical to those used in the original language questionnaires

Note that *order* of the parties is fixed, and identical to that used in the original language questionnaire. The **starting point** of the rotation (first question asked) varies per respondent and question bloc, and is recorded in T variable **T501** (for q39_ pxx), **T502** (for Q47_ pxx) and **T504** (for Q81_ pxx)

T503 records the starting point for rotation bloc **Q56-Q63Q**

Q82_1 & Q82 [country] or European citizen

Q82 probes whether Rs views themselves as a citizen of Europe or of their country.

For countries with substantial minorities/regions (Belgium, Estonia, Latvia, Lithuania and Finland), Q82 is preceded by Q82_1, where R is asked with which of the two groups R identifies. Subsequently Q82 was asked, with the answer to Q82_1 inserted as [country].

Q82_1 codes 1 and 2 indicate the following for the countries concerned:

Country	Nationality 1	Nationality 2
Belgium – Flanders	Belgian	Flemish
Belgium – Wallonia	Belgian	Walloon
Estonia	Estonian	Russian
Finland	Finnish	Swedish
Latvia	Latvian	Russian
Lithuania	Lithuanian	Russian

Code **99 [NAP]** indicates the question was not posed for this respondent/country.

T505 records the starting point for rotation bloc **Q92-Q98**

Q92-Q98 Political knowledge questions.

To ease analysis (and avoid possible embarrassment), the correct answers are

q92: False (2)

q93: False (2)

q94: False (2)

q95: True (1)

q96: True (1)

q97: False (2)

q98: False (2)

Q113 Occupation (closed answer options)

Respondent occupation, pre-categorized. The labels included in the datafile give the general header included in each country. However, because of country-specific occupational characteristics, the user is advised to check the original questionnaire text to compare the actual examples used to further describe the general labels in each of the different countries.

NOTE: In the **Luxembourg, German** language version the categories 11 and 12 were included as categories 1 and 2 in the questionnaire. This has been changed, in line with category order used in all other countries.

NOTE: In **Hungary** categories 10, 11 and 12 were omitted from the questionnaire. Category 9 combines what in other countries is included as categories 9 and 10.

V100 Sample weight per country

Sample weight (non-response population weight to correct for sampling disparities) provided by the fieldwork organization to achieve a nationally representative sample on a per country basis, based on the factors age/sex, education and region.

V200 Education – ISCED

Q101 & Q101b provide detailed information on education (highest level completed) through country specific answer options. V200 provides a cross-country comparative indicator of education level, based on the ISCED classification

(http://www.unesco.org/education/information/nfsunesco/doc/isced_1997.htm)

ISCED main levels are:

Level 0 - Pre-primary education

Level 1 - Primary education or first stage of basic education

Level 2 - Lower secondary or second stage of basic education

Level 3 - (Upper) secondary education

Level 4 - Post-secondary non-tertiary education

Level 5 - First stage of tertiary education

Level 6 - Second stage of tertiary education

Party code in vote choice/ID questions

Party name in English

Variable name: (T102) (Q39_px) (Q47_px) (Q81_px) (q25 q26 q27 q28 q87 & q90)
