

Children, Young People and Flooding

Save the Children is a charity that works around the world to make children's lives better. We are involved in a new research project with Lancaster University, which focuses on understanding the impacts of flooding on children and young people. We want to influence emergency planners and policymakers across the UK to make sure children's needs are taken into account in emergencies.

As part of the project we have been gathering photos, quotes, and video footage with the children and young people involved and we would like to use some of this to help tell their stories and raise awareness of what can be done to make children and young people more resilient to flooding.

How will film, photographs and stories be used?

Save the Children tells the stories of families from all over the world who benefit from its work. This is a really important way of us explaining to other people what we do so that we can continue to help improve the lives of children worldwide, as well as here in the UK.

We hope to make a short film that may be shared on Lancaster University's or Save the Children's website and produce reports and resources for emergency planners and policy makers.

You can find out more about the Save the Children at www.savethechildren.org.uk and Lancaster University at www.lancaster.ac.uk
