

ESRC Project

Title: Smarter Homes

The study focused on householder experiences of living with microgeneration technologies that heat the home

Files uploaded to the archive comprise a) accompanying documentation and b) 30 transcriptions (primary data)

Accompanying Documentation as follows:

Study Outline: A 1 page overview of the purpose and nature of the study

Research Design and Methodology: A page description of research questions, approach and methodology

Consent Form: A 2 page document containing information provided to participants and the consent form signed (as approved by the University of St Andrews Ethical procedures)

Classification sheet: An excel spreadsheet listing all interview with details of interviewees (anonymised)

Primary data consists of 30 transcriptions (6 Solar Thermal Heating, 12 Ground or air source heat pump, 12 Biomass Boiler)

Filenames reflect the respondent group, for example:

Transcription1STH1 is an transcription with a participant with Solar Thermal Heating

Transcription2GASHP1 is an transcription with a participant with Ground or air source heat pump

Transcription3BB1 is an transcription with a participant with a Biomass boiler
