Explanation of Thomas Edison
Invention:

Thomas Edison

The electrical bulb was first invented by Thomas Edison.

Additionally, electricity as a natural force that exist in our world was first discovered by Franklin Benjamin.

Thomas Edison was born in America. He lost his hearing at a tender age and become deaf as an adult. His attempt to make electrical bulb failed 1,000 times but successfully invented the first bulb eventually. After successfully invented the bulb, he made other appliances such as electrical pen, iron and many other appliances.

Thanks to Thomas Edison.

Uses of Electricity

Explanation about uses of electricity

How is electricity produced? Electricity is produced using water which are powered by engines to produce hydroelectric power. These are linked to electric grids connected to our homes for consumption. How we consume electricity is categorized into two: hydroelectric power and battery.

In our homes, electricity power our light bulbs, fans, refrigerator, televisions, washing machines and many other appliances.

Our cell phones are powered by battery, laptops battery, hearing aid battery, torchlight battery and many others.

What are the benefits of electricity? Our televisions are connected to electricity, when we are hot, we switch on the fan which is linked to electricity. When it is dark, we switch on the light. We also store our perishable fruits and vegetables in the refrigerator which uses electricity. Washing machine also help us to do our washing. These are all the benefits of electricity.

With battery, it help us to continue using our phones when we are outside our homes. Shaving machines also uses battery. Our laptops have batteries which can be used outside of our homes. Digital cameras also uses battery which can be used outdoors.

These and many others are the benefits of using electricity
