Dataset M8. Spatial Borderland Biography Myanmar

May 2022

Geodatabase created to support the research by the Drugs and (dis)order project, investigating the social-political dimensions of illicit drug economies in the context of war to peace transitions in the borderlands of Myanmar.

The geodatabase contains spatial data for the borderland areas studied on research sites, points of interest, administrative boundaries, population, transport and road networks, infrastructure (development projects, cell towers, places of worship, visible lights at night), agriculture, land use, hydrology and catchment areas.

Data layers are sourced from existing geospatial data layers, Open Street Map and created from satellite images.

Information on provenance and how each data layer was created, with baseline data sources used, is included in the metadata for each layer within the geodatabase. All layers are also listed in the data register attached.

Dataset location: [10.5255/UKDA-SN-855743](https://doi.org/10.5255/UKDA-SN-855743)

Dataset creator: Alcis

Location

Myanmar

Time period

The database was compiled during 2017-2021.
