

What does research impact mean to participants? Interview study to explore participants' views on the impacts of healthcare research

Data sharing arrangements

Data access is restricted due to ethical reasons. The dataset contains personal data in the form of pseudonymised qualitative interview transcripts.

17 of the 21 participants provided consent for their data to be shared with other researchers. Researchers must have appropriate research governance procedures in place and access to the data is subject to a data sharing agreement. A template data sharing agreement is provided as part of the Supporting Information Zip File.
